Save this file as "autocad.exe" (make sure to save it to the desktop) Step 2: Open the.scad file you just downloaded, or you can use the.scad file you saved in step 1. If you're using Windows, you should have.scad files with a.scad extension. If you're using Mac, you should have.scad files with a.scad extension and also a.scad file with no extension. Now, open the.scad file. This is where you'll input the data that you copied from your autocad key. You can leave all of the fields empty or you can add in your data. Remember, this is where you should input your Autocad data. Make sure to add your template first. Now, go back to the keygen. You'll see a few fields to fill in. You can enter your data here. For some reason, I was able to edit it and not just copy and paste. Fill in all of the fields in the.scad file and then click on "Generate Key." You can now start using your key! You should have the correct key. Bye! Homework I want you to go out and start using your keygen to create your own keys, however, you should use the techniques we've covered here to make sure you create a key that is as strong as possible.
